Contact: Cecilia Donnelly (613)761-5000

Fellowship Director: Dr. Richard Davies

What we offer you

The Advanced Clinical Cardiology Fellowship provides experience in the overall care of cardiac patients, including the use of specific cardiac treatment modalities and the integration of cardiac treatment with the treatment of co-existing not cardiac conditions. During the fellowship, trainees will gain experience in the state of the art care of CHF, Acute Coronary Syndromes, Valvular Heart Disease and Arrhythmias, and the integration of this care with treatment of co-existing non cardiac conditions in consultation with consultants in relevant areas. Fellows will also gain practical experience in the practice of medicine in a Canadian context. This will include the practical delivery of medical care, dealing with the issues that affect length of stay, the planning of long-term care and working with social agencies and community services to optimize long-term outcomes.

The University of Ottawa Heart Institute is a dedicated cardiac centre with a unique Advanced Clinical Cardiology Program. The core fellowship program will consist primarily of in-patient clinical service.
