Estimated % clinical workload: 75%

Number of positions annually: 1

Duration: 1 year

Start date: July 1st

Application deadline: January 2nd

Contact: Natalie McBride at (613) 737-8899 ext: 76420

Fellowship Director: Dr. Richmond Sy

What we offer you

The Ottawa Hospital Inflammatory Bowel Disease Clinic was developed to enhance the care of the IBD patient through a collaborative working environment involving gastroenterologists, colorectal surgeons, and nutrition services.

The clinic further enhances the academic goals of the department by providing an environment conducive to clinical research and ongoing staff, resident, and student education. The attributes of the clinic are further enhanced by bimonthly multidisciplinary IBD clinic rounds.

The third year fellowship allows trainees to see new IBD cases, see those sent for second opinions, follow patients through exacerbations and remissions, evaluate the effects of treatment decisions, and form long term physician - patient relationships. Furthermore, the fellow will become expert in managing urgent and complicated IBD cases.

The general objectives of the Inflammatory Bowel Disease Program is to develop knowledge of all aspects of IBD, including relevant basic sciences. This includes the genetics, patho-physiology and treatment of IBD. The resident will master consultancy, research and teaching skills as they relate to IBD.
